

About TLUX Technologies

TLUX Technologies ("TLUX") are the global training and consulting partner of Flexera.

Established in 2015, we pride ourselves in only having Consultants who are also able to deliver training courses and workshops, this means that you not only receive the official Flexera course curriculum, but also benefit from decades of real-world experience brought into the learning environment.

Flexera and TLUX have been in close partnership since 2015 with both organisations leveraging over 25 years of experience in application packaging within the TLUX team. This allows us to participate in product roadmap pre-releases, roadshow events, constant tweaking of our training and consulting content with the product suite(s) as well as a close feedback to the Flexera product and marketing teams.

Approach

Our courses are focused on practical workshops and real-world problem solving, coupled with additional tips and tricks from our world-class instructors mean that you are getting a first-rate course from our team. Most of our team spent many years (in some cases decades) working for InstallShield, Macrovision and Flexera – so you are in safe hands.

We can provide flexible course schedules and customised course content to meet your needs, at your choice of location, virtual or otherwise.

About InstallAnywhere

InstallAnywhere makes it easy for developers to create professional installation software that performs the same – no matter what the platform. You'll be able to create reliable installations for on-premises platforms like Windows®, Linux®, Apple®, Solaris®, AIX, HP-UX, and IBM, and then deploy them physically, virtually or to the cloud (you can even package it up into a Docker container) all from a single project file.

Whether for standalone instances or integrated into your current systems, with InstallAnywhere, you'll be able to adapt to industry changes quickly, get to market faster and deliver an engaging customer experience.

Course Overview

Our 5-day 'InstallAnywhere 2020' course provides you with a solid understanding of multi—platform installations - providing everything needed to create multi-platform installations for physical, virtual and cloud environments.

You will learn how to leverage the updated Designer interface and create installers that include the upgrade, maintenance and instance management functionality.

Deep-dive into the Rules Manager to create reusable platform rules which can be based on specific files types, as well as install dependencies from Linux® Package Managers, reduce steps for RPM and DEB prerequisites. You will learn how to install databases to Ibm DB2, Microsoft® SQL, Mysql® and Oracle®

Course highlights:

- Creates Java™-based installations (v13) for multiplatform applications, including Windows® 10
- Manage rules/dependencies & automation processes
- Installs Linux® package manager dependencies
- Supports latest Microsoft® certificate requirements
- Installs web apps to Tomcat™ and WebSphere®
- Creates installs that connect to IBM DB2, Microsoft® SQL, MySQL™ and Oracle
- Includes silent, console and GUI installations
- Build Docker Images from any InstallAnywhere project

InstallAnywhere 2020 New Features:

- Mac Notarization Compliance
- Amazon Corretto OpenJDK support – Amazon Corretto 8 and 11 distributions of OpenJDK.
- Improved Digital Signing for Installers –using certificate store information.
