TLUX

FLEXEra
Inform IT. Transform IT.™

About TLUX Technologies

TLUX Technologies ("TLUX") are the global training and consulting partner of Flexera.

Established in 2015, we pride ourselves in only having consultants who are also able to deliver training courses and workshops. This means that you not only receive the official Flexera course curriculum but also benefit from decades of real-world experience brought into the learning environment.

Flexera and TLUX have been in close partnership since 2015 with both organizations leveraging over 25 years of experience in application packaging across the TLUX team. This enables us to participate in product roadmap pre-releases, roadshow events, constant tweaking of our training and consulting content with the product suite, as well as a close feedback to the Flexera product and marketing teams and blogs.

Approach

Our engagements are carried out by Consultants who have decades of experience in this field, often being ex-Flexera Consultants who are still passionate about sharing their product and market knowledge and helping current Flexera customers get the most value and benefit from their purchase.

This extends not only to an unparalleled knowledge of the entire AdminStudio platform and eco-system but is also coupled with many years of real-world problem solving and strategy work to ensure you are on the right track.
About AdminStudio

AdminStudio is the de facto industry standard tool for preparing applications for deployment. With its wide range of capabilities, including but not limited to repackaging, wrapping, conversions, the Application Catalog database for managing software packages, PowerShell Cmdlets for automation, seamless integration with popular end point management systems like Microsoft ConfigMgr, Microsoft Intune, VMware Workspace ONE, and more, it caters to the needs for the basic application packaging team to the more advanced IT Desktop configuration management organizations. The AdminStudio Package Feed Module subscription includes application installations of over 3,000 software installations, including command-line options and detection methods, unlocking even further package automation within AdminStudio to further accelerate the Application Readiness process.

04-22

Overview

Our **'AdminStudio & Application Packaging HealthCheck** engagement performs a deep-dive review of your implementation and generates a health-check report that will include an overall quality rating for your implementation, plus for each area, a review of your implementation, highlighting issues found and making recommendations for improvement.

This engagement takes place remotely over 3 days, collaborating on various sessions with your team, taking several areas into account and documenting that in full detail within the resulting summary report, providing a 'heatmap' based on score for each area as illustrated below:

Application Packaging Best Practice Scorecard

Days 1 & 2: Review of Application Packaging Approach and Framework

- Review Application request analysis processes
- Analyse the packaging environment
- Review your package standards against Best Practice
- Use of automation and/or where automation may be advantageous, including additional AdminStudio modules such as virtualisation packs and Package Feed Module
- Testing and Quality Assurance techniques, troubleshooting and processes

Days 3: Creation of HealthCheck report

- Collation of findings into a standard healthcheck report, including remediation actions, benefits, approach and costs.
