TLUX

FLEXERA
Inform IT. Transform IT.™

About TLUX Technologies

TLUX Technologies ("TLUX") are the global training and consulting partner of Flexera.

Established in 2015, we pride ourselves in only having consultants who are also able to deliver training courses and workshops. This means that you not only receive the official Flexera course curriculum but also benefit from decades of real-world experience brought into the learning environment.

Flexera and TLUX have been in close partnership since 2015 with both organizations leveraging over 25 years of experience in application packaging across the TLUX team. This enables us to participate in product roadmap pre-releases, roadshow events, constant tweaking of our training and consulting content with the product suite, as well as a close feedback to the Flexera product and marketing teams and blogs.

Approach

Our engagements are carried out by Consultants who have decades of experience in this field, often being ex-Flexera Consultants who are still passionate about sharing their product and market knowledge and helping current Flexera customers get the most value and benefit from their purchase.

This extends not only to an unparalleled knowledge of the entire AdminStudio platform and eco-system but is also coupled with many years of real-world problem solving and strategy work to ensure you are on the right track.

About AdminStudio

AdminStudio is the de facto industry standard tool for preparing applications for deployment. With its wide range of capabilities, including but not limited to repackaging, wrapping, conversions, the Application Catalog database for managing software packages, PowerShell Cmdlets for automation, seamless integration with popular end point management systems like Microsoft ConfigMgr, Microsoft Intune, VMware Workspace ONE, and more, it caters to the needs for the basic application packaging team to the more advanced IT Desktop configuration management organizations. The AdminStudio Package Feed Module subscription includes application installations of over 3,000 software installations, including command-line options and detection methods, unlocking even further package automation within AdminStudio to further accelerate the Application Readiness process.

Overview

Our **'Workflow Manager HealthCheck** engagement provides the ideal top-to-bottom review of how you currently have implemented Workflow Manager and also provides you guidance and knowledge-transfer sessions with best-practices to ensure you are making the most of the technology. This review process is often crucial to introducing more business workflows into your implementation by ensuring a solid baseline.

Days 1 to 3: - Review of current Workflow Manager configuration and provide recommendations

- Review the current Workflow Manager *(incl. AdminStudio Enterprise Server) installation* and configuration, to include:
  - o Package flow from submission to deployment
  - o Reporting (both ad-hoc and automated)
  - o Use of branching logic and rollback capabilities
  - o SLA monitoring, notifications, and role-based permissions
  - o Exporting data/results from Workflow Manager
- Creation of a summary report with recommendations

Day 4 to 5: Knowledge Transfer session

- Conditional branching and rollback
- Use of metadata within the workflow
- Setting roles and permissions
- Email notifications
- Using the common application catalogue
- Importing and exporting/sharing data (XML picklists and IPlugin API)
- Uploading completed packages to a set location
- Management of SLAs

Pre-Requisites:

- Hardware and Microsoft SQL Server instance for installation as per Flexera Workflow Manager Implementation guidelines.
- Project Manager responsible for making all hardware, software and personnel available (i.e. Process Expert)
