

About TLUX Technologies

TLUX Technologies (“TLUX”) are the global training and consulting partner of Flexera.

Established in 2015, we pride ourselves in only having consultants who are also able to deliver training courses and workshops. This means that you not only receive the official Flexera course curriculum but also benefit from decades of real-world experience brought into the learning environment.

Flexera and TLUX have been in close partnership since 2015 with both organizations leveraging over 25 years of experience in application packaging across the TLUX team. This enables us to participate in product roadmap pre-releases, roadshow events, constant tweaking of our training and consulting content with the product suite, as well as a close feedback to the Flexera product and marketing teams and [blogs](#).

Approach

Our engagements are carried out by Consultants who have decades of experience in this field, often being ex-Flexera Consultants who are still passionate about sharing their product and market knowledge and helping current Flexera customers get the most value and benefit from their purchase.

This extends not only to an unparalleled knowledge of the entire AdminStudio platform and eco-system but is also coupled with many years of real-world problem solving and strategy work to ensure you are on the right track.

About AdminStudio

AdminStudio is the de facto industry standard tool for preparing applications for deployment. With its wide range of capabilities, including but not limited to repackaging, wrapping, conversions, the Application Catalog database for managing software packages, PowerShell Cmdlets for automation, seamless integration with popular end point management systems like Microsoft ConfigMgr, Microsoft Intune, VMware Workspace ONE, and more, it caters to the needs for the basic application packaging team to the more advanced IT Desktop configuration management organizations. The AdminStudio Package Feed Module subscription includes application installations of over 3,000 software installations, including command-line options and detection methods, unlocking even further package automation within AdminStudio to further accelerate the Application Readiness process.

Overview

Our ‘**Workflow Manager QuickStart**’ engagement ensures your implementation starts right by implementing a new deployment of Flexera Workflow Manager, provide an overview of that implementation process, as well as hands-on assistance via knowledge-transfer sessions coupled with best-practices guidance as time allows.

Days 1 to 2: Installing and baseline configuration

- Workflow Manager (incl. AdminStudio Enterprise Server) installation and baseline configuration on Customer supplied hardware, configured with an initial packaging workflow (based on Consultant’s recommendations or Customer’s presentation on its packaging processes).

Day 3: Knowledge Transfer session

- AdminStudio Enterprise Server training, including
 - Security Console
 - Job Manager
 - Report Center
- Workflow Manager introduction
 - Customer, Packager and Manager roles
 - Defining Workflows
 - Report Builder

Day 4 to 5: Recommendations and next steps

- Initial review of Customer’s existing workflow and packaging processes, advice on best practice approach
- Advise on the continued implementation of the initial/draft packaging data entry form and corresponding workflow. Provide further recommendations for optimizing this workflow

Pre-Requisites:

- Hardware and Microsoft SQL Server instance for installation as per Flexera Workflow Manager Implementation guidelines.
- Project Manager responsible for making all hardware, software and personnel available (i.e. Process Expert)
