

About TLUX Technologies

TLUX Technologies (“TLUX”) are the global training and consulting partner of Flexera. Established in 2015, we pride ourselves in only having consultants who are also able to deliver training courses and workshops. This means that you not only receive the official Flexera course curriculum but also benefit from decades of real-world experience brought into the learning environment.

Flexera and TLUX have been in close partnership since 2015 with both organizations leveraging over 25 years of experience in software licensing optimization across the TLUX team.

Approach

Our engagements are carried out by consultants who have decades of experience in this field and helping current Flexera customers get the most value and benefit from their purchase.

This extends not only to an unparalleled knowledge of the entire FlexNet Manager for Engineering Applications® platform and eco-system but is also coupled with many years of real-world problem solving and strategy work to ensure you are on the right track with your Software License Optimization needs

About FlexNet Manager for Engineering Applications

Save money and time through software license optimization on technical, engineering and industrial applications across the enterprise. Identifying and analyzing usage trends, patterns, denials and anomalies can improve and tune concurrent license performance and usage, and even reduce software expenditure. But when not used properly, concurrent licensing carries significant risks and challenges. That’s when FlexNet Manager for Engineering Applications (FNM-EA) can make a big difference. automation within AdminStudio to further accelerate the Application Readiness process.

FNM-EA centralizes license server administration for thousands of FlexEnabled® (FlexNet Publisher, FLEXIm) and other concurrently licensed applications, including AutoCAD®, MATLAB®, IBM® Rational®, CATIA® and Petrel. Automatic reporting on software usage and license denials help maximize utilization of assets. Powerful reporting capabilities help organizations gain unprecedented insight into application usage trends and efficiently share licenses across the enterprise and includes Flexera Analytics that enable customers to analyze usage across business units, locations, projects and contracts to understand usage patterns, properly track project-based spending and chargeback for consumption of licenses

Overview

Our ‘FlexNet Manager for Engineering Applications (FNM-EA) QuickStart’ ensures you get off to the right start by providing an overview of the implementation process, as well as hands-on assistance coupled with best-practices guidance throughout.

Day 1: Installing/Configuring FNM-EA and training

- FlexNet Manager for Engineering Applications installation and baseline configuration on your infrastructure
- Installation and configuration of a single agent on a single license server and validation of associated license file and vendor daemon(s)
- End-to-end system walkthrough
- FlexNet Manager for Engineering Applications hands-on training based on Customer’s specific needs, to include:
 - FlexNet Manager for Engineering Applications Overview, Agent installation and configuration
 - Working with FlexNet Manager for Engineering Applications, configuring Alerts
 - Troubleshooting Licensing Issues
 - FlexNet Manager for Engineering Applications Reporting (*we have a follow-on more in depth Cognos Reporting training offering – please ask for more details*)
 - FLEXwrap

Days 2&3: Review license management process

- Review of Customer’s license management processes and initial configuration of:
 - Roles
 - Alerts
 - Reporting (*Up to 3 reports to reflect the your license management processes*)
- Installation and configuration of agent on additional license servers as time permits
