

## Application Packaging with AdminStudio training course

### About TLUX Technologies

TLUX Technologies ("TLUX") are the global training and consulting partner of Flexera.

Established in 2015, we pride ourselves in only having consultants who are also able to deliver training courses and workshops. This means that you not only receive the official Flexera course curriculum but also benefit from decades of real-world experience brought into the learning environment.

Flexera and TLUX have been in close partnership since 2015 with both organisations leveraging over 25 years of experience in application packaging across the TLUX team. This enables us to participate in product roadmap pre-releases, roadshow events, constant tweaking of our training and consulting content with the product suite, as well as a close feedback to the Flexera product and marketing teams and [blogs](#).

### Approach

Our courses are focused on practical workshops and real-world problem solving and coupled with additional tips and tricks from our world-class instructors, meaning that you are getting a first-rate course from our team. Most of our team spent many years (in some cases decades) working for InstallShield and Flexera – so you are in safe hands.

We can provide flexible course schedules and customized course content to meet your needs at your choice of location, be it virtual or otherwise.

### About AdminStudio

AdminStudio is the de facto industry standard tool for preparing applications for deployment. With its wide range of capabilities, including but not limited to repackaging, wrapping, conversions, the Application Catalogue database for managing software packages, PowerShell Cmdlets for automation, seamless integration with popular end point management systems like Microsoft ConfigMgr, Microsoft Intune, VMware Workspace ONE, and more, it caters to the needs for the basic application packaging team to the more advanced IT Desktop configuration management organisations. The AdminStudio Package Feed Module subscription includes application installations of over 3,000 software installations, including command-line options and detection methods, unlocking even further package automation within AdminStudio to further accelerate the Application Readiness process.

### Course Overview

Our 5-day 'Application Packaging with AdminStudio training course' will teach you how to use AdminStudio's suite of tools to perform the most common application migration tasks like repackaging traditional setups into MSI and MSIX packages, customize those packages via Transforms for existing third-party MSI packages, and Modification Packages for MSIX. In addition, you'll learn to work through the challenges and configuration for successful package virtualisation and deployment of all package types to various distribution systems. We also show how to use AdminStudio to identify, manage and resolve conflicts between packages, the Windows OS, Java, and more before deployment and best practices around that.

### Course highlights:

- Identify and mitigate Operating System compatibility issues with all the new versions of Windows 11
- Best practices for creating packages for reliable and successful deployment
- Integrate and distribute packages to popular end point management systems, including Microsoft Endpoint Configuration Manager (formerly SCCM) and Intune
- Convert legacy packages to MSIX and App-V
- Wrap packages in PowerShell/WiseScript, leveraging the out of the box easy to use script templates
- With Package Feed Module, gain access to latest version of over 3100 vetted installers with download links, validated silent command line switches, and detection methods for many of these packages
- A wide range of PowerShell Cmdlets to automate various tasks within AdminStudio itself

### Pre-Requisites:

- Previous AdminStudio experience is not required. However, you should be comfortable using Windows File Explorer and the command prompt to create and manage files, run executables, and understand basic Windows terminology.
