About TLUX Technologies & Access IT Automation

TLUX Technologies ("TLUX") are specialists in application packaging, OS migrations, installation authoring and much more. We partner with many organisations globally to bring technology and pioneering knowledge to our client base.

Established in 2015, we pride ourselves in having a hugely experienced team who bring over 25 years practical experience in this space, servicing clients of all sizes and in a range of markets, every week of the year there is a TLUX project being delivered somewhere in the world!

Access IT Automation and TLUX bring in our partnership a 'best of breed' combination of the latest innovating technical consultants with the latest in Application Packaging streamlining and automation via the Access Capture platform, this being the natural evolutionary step for enterprises who are looking to leverage smarter, faster and more accurate application packaging throughput whether for an OS migration to Windows 10/11 or those in a 'business as usual' mode.

Combined Approach

Our engagements are carried out by Consultants who have decades of experience in this field, who are passionate about sharing their product and market knowledge.

This extends to an unparalleled knowledge of the entire Access Capture platform and eco-system but is also coupled with many years of real-world problem solving and strategy work to ensure you are on the right track and future-proofed.

About Access Capture

Access Capture is an application packaging and testing solution that delivers substantial financial, efficiency, and user experience benefits for organisations with complex hybrid ecosystems that want to optimise and automate technology management tasks. It can be fully tailored to customer requirements and is compatible with all common application formats.

Access Capture is a market leader in automated application packaging and testing solutions. It offers the widest range of application file formats, and it is compatible across devices, platforms, and operating systems, making it suitable for even the most complex of hybrid technology landscapes. It also offers optimal flexibility, with APIs to integrate with existing tools as well as an intuitive, ready-to-go user interface.
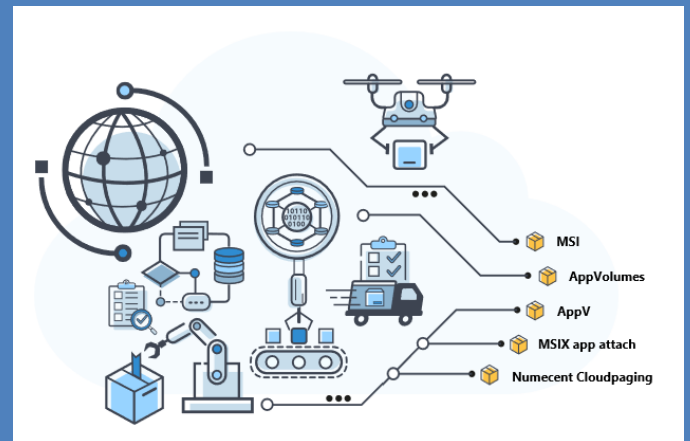

Technology Overview

Access Capture automates application packaging, testing, and deployment in all types of organisations, including those with complex technology ecosystems.

The main target audience is organisations that have large numbers of technology end users, often with highly varied software requirements.

The technology teams in these organisations currently spend significant amounts of time on highly repetitive and time-consuming packaging and testing tasks. Access Capture delivers substantial cost and time savings through its powerful automation capabilities.

Illustration of overall eco-system:

Key Benefits:

- Save time through automation
- Reduce costs and greatly speed up packaging
- Adaptable to your requirements
- Make better decisions and mitigate risks
- Operate the way you need to
- Compatible with multiple application formats *(MSI, AppV, MSIX, AppVolumes and AppAttach)*
- Designed for hybrid and complex ecosystems
- Can be driven either via UI or full API model
