TLUX

flexera™

About TLUX Technologies

TLUX Technolog ies ("TLUX") are the global training and consulting partner of Flexera.

Established in 2015, we pride ourselves in only having consultants who are also able to deliver training courses and workshops. This means that you not only receive the official Flexera course curriculum but also benefit from decades of real-world experience brought into the learning environment.

Flexera and TLUX have been in close partnership since 2015 with both organizations leveraging over 25 years of experience in application packaging across the TLUX team. This enables us to participate in product roadmap pre-releases, roadshow events, constant tweaking of our training and consulting content with the product suite, as well as a close feedback to the Flexera product and marketing teams and blogs.

Approach

Our engagements are carried out by Consultants who have decades of experience in this field, often being ex-Flexera Consultants who are still passionate about sharing their product and market knowledge and helping current Flexera customers get the most value and benefit from their purchase.

This extends not only to an unparalleled knowledge of the entire AdminStudio platform and eco-system but is also coupled with many years of real-world problem solving and strategy work to ensure you are on the right track.

About AdminStudio

AdminStudio is the de facto industry standard tool for preparing applications for deployment. With its wide range of capabilities, including but not limited to repackaging, wrapping, conversions, the Application Catalog database for managing software packages, PowerShell Cmdlets for automation, seamless integration with popular end point management systems like Microsoft ConfigMgr, Microsoft Intune, VMware Workspace ONE, and more, it caters to the needs for the basic application packaging team to the more advanced IT Desktop configuration management organizations. The AdminStudio Package Feed Module subscription includes application installations of over 3,000 software installations, including command-line options and detection methods, unlocking even further package automation within AdminStudio to further accelerate the Application Readiness process.

06-24

Overview

Our **'AdminStudio 2022 Refresher and Review'** engagement will provide an overview of the AdminStudio 2020 features, where we will carry out a review of your repackaging environment and give hands-on help to move you in the right direction and provide any recommended next steps:

Day 1 & 2: - AdminStudio 2022 features overview

- Enhanced Package Automation (e.g., Package Feed Module matching- enhancing the Application Catalog)
- Tailoring the packaging automation processes with 'Configure Actions' and enable automation scheduling.
- Importing from & distributing to Microsoft ConfigMgr and/or Intune, including MSI/EXE conversion
- Additional functionality by leveraging the PowerShell Cmdlets (Enterprise edition only)
- InstallShield support, such as:
  - MSIX support (bundles, services support, Modification Packages, MSIX Core, Pure 64bit and AWS Cloud support)
  - Updated Setup Pre-requisites downloader

Day 3 & 4: High-level review of Packaging Environment

- Process flow and structure
- Package request process and documentation
- Progress tracking, reporting, and remediation
- Deployment integration and feedback
- Overall AdminStudio implementation feedback

Day 5: Hands-on repackaging assistance and troubleshooting

- Work on areas identified in previous days which can be applied as time allows
- Potential follow-on Statement-of-Work (SOW) for any further consulting services requested

Pre-Requisites:

- Project Manager responsible for making all hardware, software and personnel available throughout engagement.
- Hardware infrastructure per the Flexera AdminStudio implementation guidelines for any aspects not yet implemented
