

About TLUX Technologies

TLUX Technologies (“TLUX”) are the global training and consulting partner of Flexera.

Flexera and TLUX have been in close partnership since 2015 with both organizations leveraging over 25 years of experience in application packaging across the TLUX team. This enables us to participate in product roadmap pre-releases, roadshow events, constant tweaking of our training and consulting content with the product suite, as well as a close feedback to the Flexera product and marketing teams and [blogs](#).

Approach

Our engagements are carried out by Consultants who have decades of experience in this field, often being ex-Flexera Consultants who are still passionate about sharing their product and market knowledge and helping current Flexera customers get the most value and benefit from their purchase.

This extends not only to an unparalleled knowledge of the entire AdminStudio platform and eco-system but is also coupled with many years of real-world problem solving and strategy work to ensure you are on the right track.

About AdminStudio

AdminStudio is the de facto industry standard tool for preparing applications for deployment. With its wide range of capabilities, including but not limited to repackaging, wrapping, conversions, the Application Catalog database for managing software packages, PowerShell Cmdlets for automation, seamless integration with popular end point management systems like Microsoft ConfigMgr, Microsoft Intune, VMware Workspace ONE, and more. The AdminStudio Package Feed Module subscription includes application installations of over 5,000 software installations, including command-line options and detection methods, unlocking even further package automation within AdminStudio to further accelerate the Application Readiness process.

Engagement Overview

Our ‘AdminStudio with Package Feed Module QuickStart’ engagement will ensure your AdminStudio implementation gets off to the right start by implementing a new deployment of AdminStudio, provide an overview of that implementation process, as well as hands-on assistance coupled with best-practices guidance.

Days 1 to 5: Installing and Configuring AdminStudio and Hands-on Packaging Consulting:

- Application Manager & Catalog Installation, Editor settings, virtual machine setup for Automated Application Converter (AAC) and automation configuration
- Coaching and shadowing on the installation process
- Best Practice integration guidance for technical team
- Introduction of Quality Assurance Best Practices and testing rules to automate packaging processes as required
- A further 2 days as contingency are designed in order to work through with any uncompleted tasks that may occur

Days 6 & 7: AdminStudio Package Feed Module (PFM):

We will carry out an expert implementation and configuration of the PFM within your environment and share best-practice guidance and training or mentoring to your team.

- Implement AdminStudio PFM within your environment
- Provide knowledge-transfer and walkthrough of the AdminStudio PFM
- Carry out integration with your distribution environment as required (*Microsoft Endpoint Configuration Manager, Microsoft Intune, VMWare Workspace One*)
- Provide an overview of the distribution platform integration settings to your team so they can document and update processes and procedures as required
- Implement automation of the AdminStudio PFM and importing/exporting packages to your distribution environment as required

Pre-Requisites:

- Hardware and Microsoft SQL Server instance as per AdminStudio Implementation guidelines
- Project Manager responsible for making all hardware, software and personnel available during this engagement
