

About TLUX Technologies

TLUX Technologies (“TLUX”) are the global training and consulting partner of Flexera.

Established in 2015, we pride ourselves in only having consultants who are also able to deliver training courses and workshops. This means that you not only receive the official Flexera course curriculum but also benefit from decades of real-world experience brought into the learning environment.

Flexera and TLUX have been in close partnership since 2015 with both organizations leveraging over 25 years of experience in application packaging across the TLUX team. This enables us to participate in product roadmap pre-releases, roadshow events, constant tweaking of our training and consulting content with the product suite, as well as a close feedback to the Flexera product and marketing teams and [blogs](#).

Approach

Our engagements are carried out by Consultants who have decades of experience in this field, often being ex-Flexera Consultants who are still passionate about sharing their product and market knowledge and helping current Flexera customers get the most value and benefit from their purchase.

This extends not only to an unparalleled knowledge of the entire AdminStudio platform and eco-system but is also coupled with many years of real-world problem solving and strategy work to ensure you are on the right track.

About AdminStudio Package Feed Module

Time-consuming research and testing have required attention of administrators—until now. The AdminStudio Package Feed Module provides integrated downloading along with valuable details for thousands of application installers, eliminating the time-consuming effort in trying to identify the latest version of a product and where to get it, the silent installation parameters for a particular version of an application, testing, and even determining the detection rules often needed for a successful deployment.

The largest resource of its kind, the Package Feed Module provides details on installers to help you create deployment packages faster. Just select a product, download it and get version validated command line parameters directly within AdminStudio.

Overview

Our 2-day ‘AdminStudio Package Feed Module QuickStart engagement will carry out an expert implementation and configuration of the Package Feed Module within your AdminStudio environment and provide best-practice guidance as well as training/mentoring of your team.

The approach and objective of this engagement are:

- Implement AdminStudio Package Feed Module within your AdminStudio environment
- Provide hands-on knowledge-transfer and a walkthrough of the Package Feed Module to your team
- Carry out integration with your distribution environment as required (Microsoft Endpoint Configuration Manager, Microsoft Intune, VMWare Workspace One)
- Provide an overview of the distribution platform integration settings to your team so they can document and update processes and procedures as required
- Assist your team to implement automation of the Package Feed Module and importing/exporting packages to your distribution environment as required
- Assist your team (as time allows) with any AdminStudio or Package Feed Module troubleshooting and identify any potential follow-up areas/activities

Pre-requisites

- Flexera AdminStudio server/instance with has already been installed to your repackaging environment
