

About TLUX

TLUX Technologies (“TLUX”) are the global training and consulting partner of Flexera.

Established in 2015, we pride ourselves in only having Consultants who are also able to deliver training courses and workshops, this means that you not only receive the official Revenera course curriculum, but also benefit from decades of real-world experience brought into the learning environment.

Flexera and TLUX have been in close partnership since 2015 with both organisations leveraging over 25 years of experience. This allows us to participate in product roadmap pre-releases, roadshow events, alignment of our training and consulting content with the product suite(s) as well as a close feedback to the Flexera product and marketing teams.

Approach

Our courses are focused on practical workshops and real-world problem solving, coupled with additional tips and tricks from our world-class instructors mean that you are getting a first-rate course from our team. Most of our team spent many years (in some cases decades) working for InstallShield and Flexera – so you are in safe hands.

We can provide flexible course schedules and customised course content to meet your needs, at your choice of location, virtual or otherwise.

About InstallShield

Today's computing environments are complex and come with an ever-expanding list of installation requirements and nuances to consider. New operating system versions, virtualization technologies, multiplatform requirements and emerging platforms such as Universal Windows Platform and Docker make the creation of professional software installation programs increasingly more challenging.

With all that, a smooth install is closer than you think. The key is to consider the installer early on in the process.

Consistent and reliable installs. Every time. Revenera InstallShield delivers a seamless user install. Choose from a variety of installers and packages – standalone or complex suites. Develop MSI and EXE installers, and create Universal Windows Platform (UWP) and Windows Server App packages with minimal scripting, coding and rework. Then easily deploy to Windows Store and Nano Server.

Course Overview

Our 5-day ‘Learning MSI Projects with InstallShield 2024’ course provides you with a solid understanding of installation terminology, the tasks an installation program needs to perform, and the InstallShield development environment.

In this course, you will learn how to customize your installation with custom actions in order to make changes to your end users’ systems. You will also see how to correctly identify, install, and configure special types of files (e.g., COM servers, Windows services, and .NET assemblies). You will understand how to perform simple to sophisticated changes to your installation’s user interface and processing. This course teaches you how to create Basic MSI projects, which use the Windows Installer service (MSI) for the installation’s behaviour and appearance.

For InstallScript training, please contact info@tlux-group.com

Course highlights:

- Create and organize an installation project
- Install files and create shortcuts
- Install and configure special types of files and data, registry, INI data, COM servers, Services, and .NET Core (including in Custom Actions)
- Work with MSI sequences and custom actions
- Customize your installer’s user interface
- Package your installer for Windows 11, Server OS’s, Azure Key Vault signing and more
- Windows Package Manager Apps (WPM) support
- Learn about the Automation Interface
- Get MSIX Ready with a full overview of support
- Creating Cloud builds
